Function A: Delay on Energisation

Description

The timing period T begins on energisation. After timing, the output R closes.

$$T = t1 + t2 + t3$$

Function B: Timing on Impulse, One Shot

Description

After power-up, pulsing or maintaining control contact C starts the timing T. The output R closes for the duration of the timing period T then reverts to its initial state.

$$T = t1 + t2 + t3$$

Function C: Timing After of Control Contact

Description

After power-up and closing of the control contact, the output closes. When control contact re-opens, timing T starts. At the end of the timing period, the output reverts to their initial state.

$$T = t1 + t2 + t3$$

Function Di: Symmetrical Flashing, Start with Output in Operating Position

Description

Repetitive cycle with two timing periods T of equal duration, with output changing state at the end of each timing period T.
